

POWERBOND®

Tandus | Centiva
A Tarkett Company

POWERBOND®

Powerbond is a hybrid resilient sheet floorcovering. The closed-cell resilient cushion of Powerbond is the DNA that enables superior performance and insulation properties. The wear layer is permanent, requires no waxing or finishing and is easy to maintain. Powerbond is the first hybrid resilient flooring to provide an impermeable barrier to moisture and contaminants.

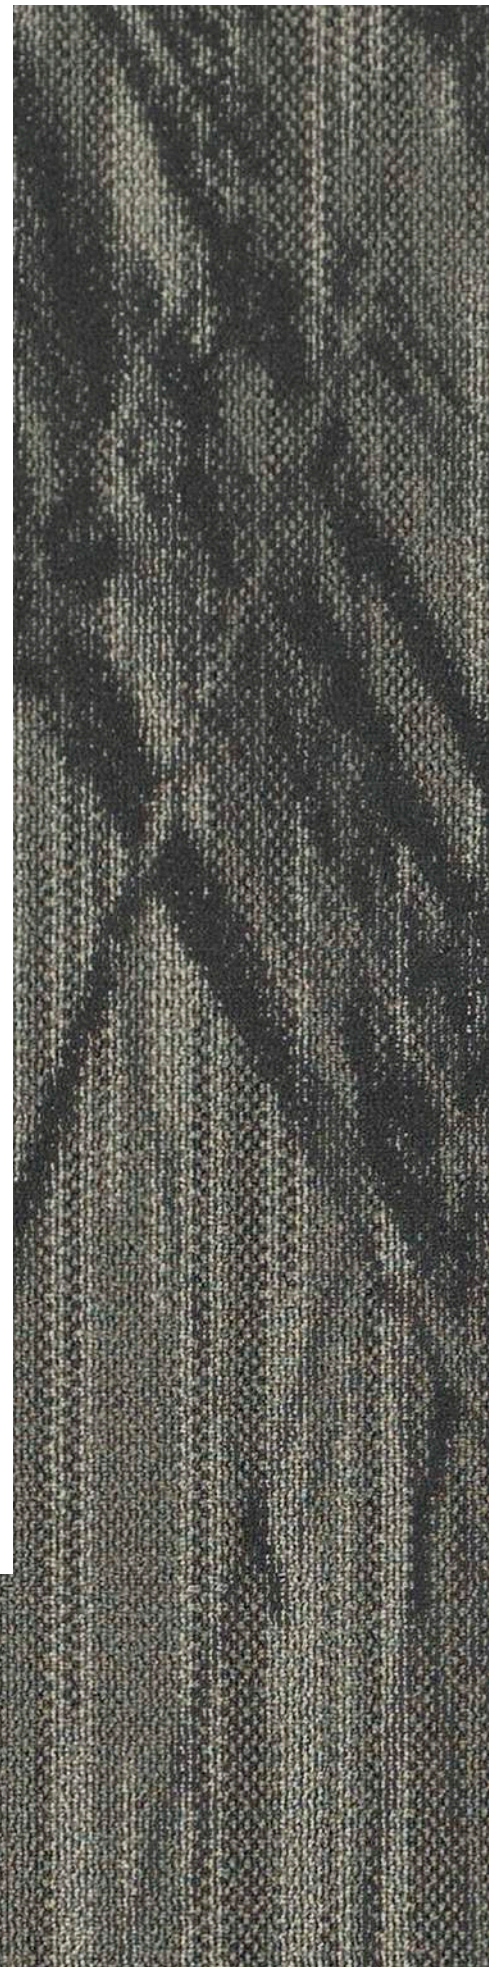

*Heat and pressure
"Powerbond" the wear
layer to the closed-cell
cushion, producing a
floorcovering that is
integral and inseparable.*

Why Powerbond?

Tandus Centiva's Powerbond, a heterogenous construction of nylon and closed-cell cushion is:

- Fiscally responsible
- Supports a healthier indoor environment
- Environmentally responsible
- Serves as a medium for visual innovation

Tandus Centiva's Powerbond® is the only product to ever win the prestigious Antron® Sustainable Performance Flooring Award. In fact, Powerbond installations have won six consecutive times.

2012

Nederland Elementary School
Boulder, CO
Installed in 1975

2009

Westminster High School
Westminster, CO
Installed in 1975

2007

Ephrata Middle School
Ephrata, WA
Installed in 1985

2005

Weld County Schools
(Meeker & Centennial Elementary
Schools)
Greeley, CO
Installed in 1972

2004

Fairbanks International Airport
Fairbanks, AK
Installed in 1979

2003

Prospect Valley Elementary School
Wheat Ridge, CO
Installed in 1967

Fiscally responsible

Powerbond simply has no equal when it comes to performance and durability. With installations lasting for 40 years, there is no delamination, edge ravel, zippering or loss of resiliency. Powerbond performs over the long run in the most demanding environments.

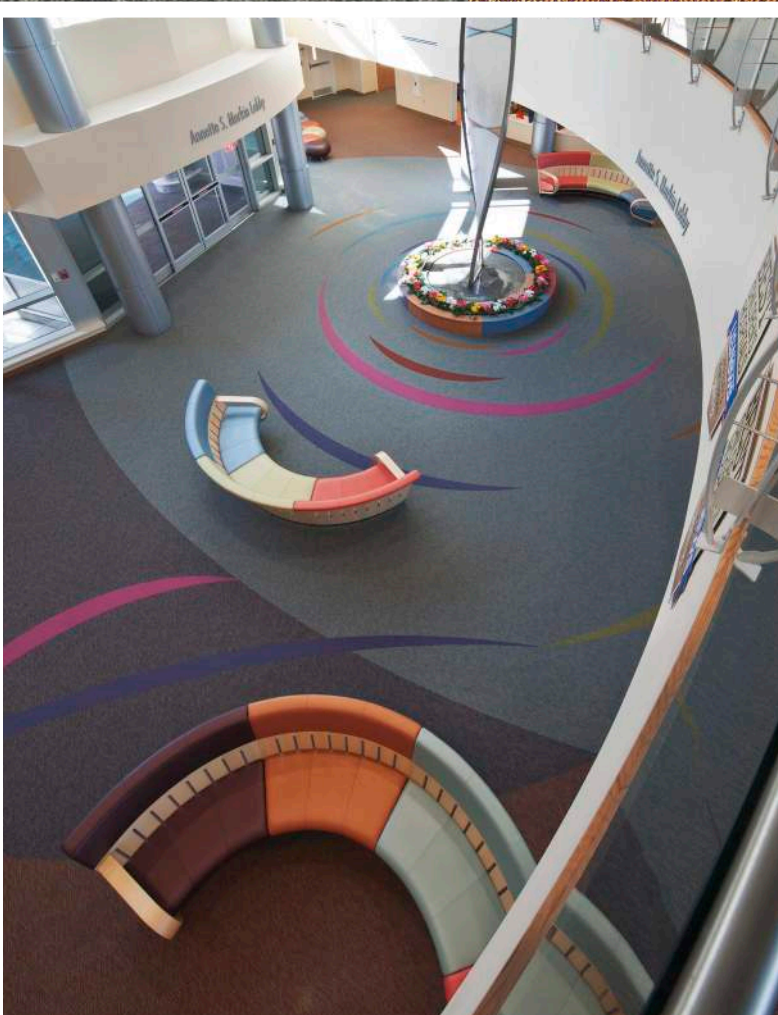

- Powerbond is easy to own and provides an immediate cost savings compared to carpet and other resilient floors.
- Powerbond is less costly to maintain than VCT and less costly to repair compared to broadloom and modular carpet.
- No MVER testing or RH testing.
- Lifetime Limited Warranty.

Environmentally responsible

All Powerbond products are 100% closed-loop recyclable through the ReStart® Program.

Powerbond ethos® Cushion:

- Contains 37% - 62% recycled content and a minimum of 37% postconsumer content (depending on style)
- NSF 140 Platinum
- Lowest embodied energy footprint (BEES)
- Peel & Stick installation virtually eliminates VOC's

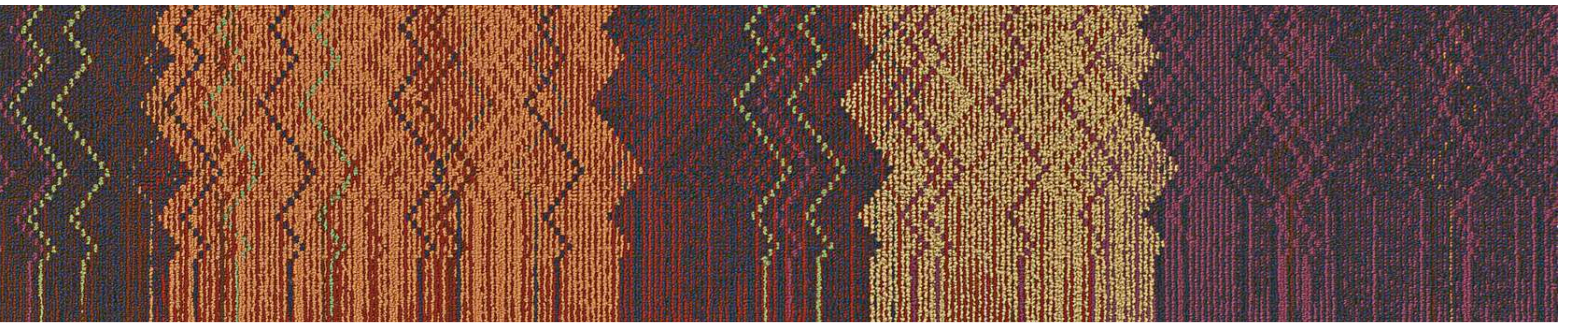

Supports a healthier indoor environment

Powerbond is engineered to provide safe and comfortable environments for healing, learning, working and living.

- Improves indoor air quality and reduces VOC's
- Eliminates chemicals – no antimicrobials added
- Provides a safer floor – nylon wear layer offers excellent slip resistance and closed-cell cushion absorbs impact from falls
- Greater comfort and ergonomic support (closed-cell cushion is the optimal design for reduced leg fatigue)
- Eliminates reflective glare
- Creates quieter environment and improves acoustics

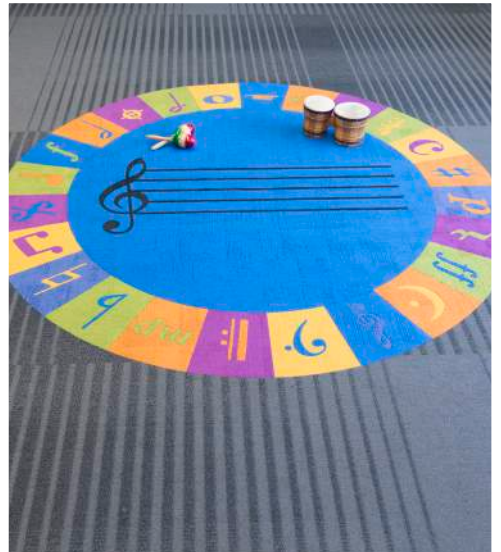

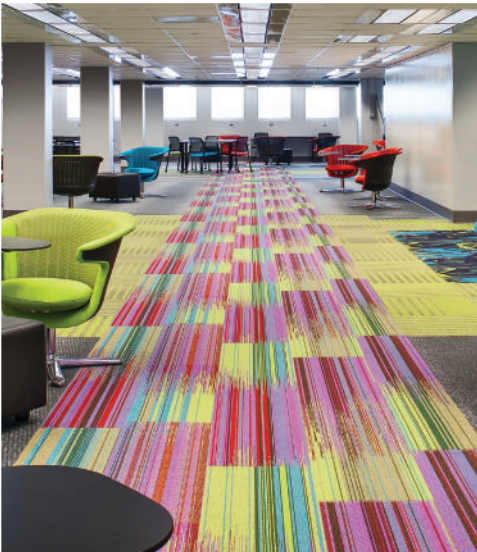

Serves as a medium for visual innovation

The floor truly becomes a blank canvas for Powerbond. Due to its heterogeneous construction and welded seams, Powerbond is the perfect medium for creating inlay designs, borders, wayfinding and more without compromising performance or durability.

- Mix and match hundreds of coordinating styles and colors to create intricate graphic features or expansive thematic schemes.
- If you can imagine it, it can be translated to the floor with our Imaginations™ Custom Floor Design capabilities.
