

Over a decade ago, one of our clients presented us with a challenge:
Create a soft surface floor solution that has a positive environmental impact,
uses a PVC-alternative, and makes no compromises on quality.

The solution came from an unexpected place: broken windshields.

Cradle to Cradle Certified™ Silver v3.0

ethos® Modular is made with safe chemistry. Its ingredients have been rigorously assessed by a third party for human and environmental health. Tandus Centiva does not add antimicrobial agents to its floorcoverings, because unnecessary chemicals don't belong indoors. ethos Modular is the first of its kind in North America to be Cradle to Cradle Certified Silver v3.0.

Install faster. Breathe easier.

ethos Modular with TandusTape+™ provides a faster, free-lay installation and provides long-lasting durability with low VOCs.

Protection from Moisture

ethos Modular creates a powerful barrier for protection against moisture and is durable enough for nearly any subfloor condition.

ethos Modular with TandusTape+ stands up to subfloor conditions of 15 lbs MVER, 98% RH and 11.0 pH and passes 10,000 impact moisture penetration testing.

Backing Innovation

We were the first to harness the PVB film in windshields and safety glass, creating a proven alternative to traditional carpet backing polymers. PVB film is a responsibly sourced, postconsumer material that is fully recyclable.

ethos Modular is a natural expression of what we really believe in at Tandus Centiva. It is true time-tested innovation for the future of flooring.

That's a story we're proud of.

And we're far from finished.

ethos®

TIME-TESTED INNOVATION FOR THE FUTURE OF FLOORING
