The image shows a modern, multi-level office space. In the foreground, there is a wide wooden staircase with a dark metal railing. The floor is made of light-colored wood. In the background, there is a red beanbag chair on a grey carpeted area. A sign on the wall reads "WORK & SHARE". The space is bright and open, with large windows and a high ceiling.

Finding inspiration in the work environment

The way we work is changing and with it the definition of a modern workplace. A more holistic approach to design helps create inspiring, multi-purpose spaces that support the health and wellbeing of the workforce, which in turn leads to better productivity and results for an organization.

Flooring plays a key role by providing benefits such as improved air quality, sound control, comfort and light reflection. At Tarkett, we are committed to developing sustainable flooring solutions that not only create value but also enhance people's wellbeing and respect the environment.

Main requirements

INDOR AIR QUALITY

Today most people spend around 90% of their time indoors, so workplace interiors that provide health and well-being are more important than ever.

- No harmful components
- The lowest VOC emissions
- No toxic pollutants

HYGIENE, EASY CLEANING & LOW-COST MAINTENANCE

CONTEXT: 80% of dirt comes from outside and 90% of micro-organisms are found in visible dirt*. For good hygiene, it's important to easily clean dirt and floor soiling. Not only that, but flooring maintenance represents 50-70% of a building's total maintenance budget. Facility managers require a solution that reduces their long-term costs.

SOLUTION: Tarkett strives to minimize your maintenance costs and assist daily cleaning:

- Reduce levels of dirt and moisture carried into the building to a minimum, with 3-step entrance mats
- Choose low-maintenance products that require no stripping, wax or polish, and assist cleaning in sensitive areas with coving

*source: WHO

DURABILITY & RESISTANCE

CONTEXT: Today, most people are spending more time in their offices than in their own houses. Offices run minimum 5 days per 8 hours weekly, and they have to stand up to rough treatment. Therefore it is important to select durable materials that will resist heavy traffic and do not require heavy maintenance.

SOLUTION: Minimize daily attacks and stresses by using Tarkett's highly resistant flooring, especially to abrasion and indentation.

DESIGN CONCEPT (Easy navigation and zoning)

CONTEXT: Different textures, designs and colours can be used to create walking paths and distinct zones, establishing places to work, to collaborate, to quietly concentrate, or to build a sense of community.

SOLUTION: Our broad portfolio of flooring solutions — including carpet, modular vinyl, wood, laminate and linoleum — can provide limitless design possibilities and opportunities to express a brand identity, as well as offer inspiring transitions from one area to another.

A WELL-DESIGNED ENTRANCE FOR LIGHTER MAINTENANCE

A well-designed entrance mat is key to reducing cleaning costs and increasing flooring durability.

- 1 Outside the building to get rid of most of the dirt on rough cleaning mats.
- 2 At the entrance to dry shoes with absorbing mats.
- 3 Inside the reception area, textile mats to absorb any remaining moisture from footwear.

ACOUSTIC COMFORT

CONTEXT: Noise levels within a room can be a real issue, and need to be controlled for favourable work conditions and a positive brand image. Flooring is one of many construction materials that can reduce the amount of sound in a given space.

SOLUTION: To reduce noise and in accordance with building constraints, Tarkett offers a range of flooring solutions:

- to limit in-room noise linked to footsteps and furniture movements
- that ranges from class A to C

SUSTAINABILITY COMMITMENT

CONTEXT: Sustainable building design is key to durable constructions that have minimal environmental impact, without compromising on quality of life. All building materials, including flooring, must meet specific norms to earn certification from one of the exacting ecobuilding systems around the world (LEED (US), BREEAM (UK), HQE (France), etc.).

SOLUTION: Tarkett is a leader in environmentally responsible manufacturing and sustainable product development with our 4 key pillars:

- Use better materials: natural, renewable and recycled resources, choose Cradle to Cradle products
- Use fewer resources: limit water, energy consumption and waste generation
- Create people-friendly spaces: lowest VOC emissions and phthalate-free technology
- Recycle program contributes to environmental protection

SLIP RESISTANCE

CONTEXT: Slipping can cause serious injuries. People are most exposed to falls in wet areas.

SOLUTION: Tarkett has a range of solutions that reduce the risk of slipping:

- Specific flooring for use in food and non-food areas
- Safety flooring that include many decors and colours to match with different office concepts

A solution for every space

Tarkett offers solutions that meet every requirement set by the type of room and its needs, whether it's a common area where people go to relax and socialize, an office space that has to facilitate and keep the focus among its occupants, or a public restroom. No need to stress – with a large variety of materials and designs, we've got it covered!

OPEN SPACES

A forward-thinking open workspace offers an ecosystem of interconnected zones and settings, giving staff choice and control over where and how they work. Different materials, textures and designs can be effectively combined to indicate the purpose of each area and make it easy for staff to find their way around the office.

Modular flooring products, such as carpet tiles and vinyl planks, can provide particular design flexibility and offer inspiring transitions from one area to another.

Busy workplace corridors need durable floors that can withstand heavy foot traffic and are easy to clean and maintain. In consideration of their proximity to private offices, think about choosing floors that are specifically designed to reduce noise. Additionally, designs that generate a sense of rhythm are an excellent choice to break up any visual monotony.

| STAIRCASES

Whether a stylish part of the building or a healthy alternative to the elevators, staircases are sensitive areas with special safety concerns.

The staircase flooring will have to withstand heavy traffic, provide a slip-resistant grip and improve accessibility with contrasting colours and structured stair noses. In the case of a fire escape stairwell, the floor will also need to comply with fire regulations.

Alethea, Bucharest, Romania, Vinyl Tapiflex Stairs

TARKETT RECOMMENDATION	Tapiflex Stairs	Inside & outside stair corners	Warning tiles	Stair nose

RESTROOMS & TOILETS

Restrooms need to stay safe and clean at all times. In particular, floors should provide a firm grip to prevent people from slipping on wet areas around the sink and toilet areas. Installation needs to be watertight, so consider a full solution of integrated wetroom products that include matching floors, wallcoverings and accessories.
