LUXURY VINYL TILES

Cruise  
in style

## Tarkett know-how at the service of marine

Celebrating 140 years of expertise, Tarkett has established itself as a renowned global leader in the flooring industry. Our unwavering commitment to excellence and worldwide presence allows us to offer you unparalleled products and comprehensive support tailored to your requirements.

With a focus on bespoke solutions, Tarkett covers every aspect from design to customer service, ensuring that each Marine project receives the utmost attention. We understand the unique demands of the Marine sector and proudly provide a diverse range of flooring solutions including Carpet, LVT, and Linoleum.

For over three decades, we have been a trusted partner in the Marine industry, consistently exceeding industry standards. Our collaborations with esteemed companies such as Princess Cruises, Carnival Cruises Group, and MSC Group exemplify our dedication to delivering comprehensive services.

Ultimately, our aim is to become your go-to partner for all your Marine flooring needs. Count on us to provide the expertise, quality, and support necessary for your success.

# The ultimate hard and soft flooring solution provider

Embark on a journey where spaces come to life.

We skillfully merge resilient and carpet flooring, offering a seamless blend of functionality and style, ranging from standard options to tailor-made solutions.

# Create an incredible and memorable experience

iD Inspiration Marine is a collection of premium Luxury Vinyl Tiles designed specifically to bring authentic and realistic styles to your ships.

JAVA - Teak  
SAN MARCO - Light

## 16 styles (in stock & made-to-order)

Create a warm and inviting atmosphere in your cabins with our range of **classic and elegant wood designs**. Indulge in the timeless charm, reminiscent of a cozy home setting. Stand out from the crowd by incorporating our **cement, terrazzo, and marble** styles into bars, restaurants, and all public areas of your ships.

## PUR surface treatment

Experience the ultimate realism with our PUR matt finish and high-definition printing, which provide a visually stunning representation of the natural materials.

## CUSTOMIZE your ambiance

Our collection offers compatibility for mixing and matching different styles. Unleash your creativity as you combine various styles and designs, allowing you to create unique zones and dynamic spaces. Complete the ambiance of your vessel with our range of additional decorative accessories.

## 3 formats

# Meeting the highest industry safety standards

iD Inspiration Marine is meticulously designed to cater the distinct needs of marine settings, adhering to the most stringent industry standards for fire safety. It is certified as per IMO/ MED regulations (IMO Part 2 /5 Compliant).

Furthermore, iD Inspiration Marine boasts an R10 slip resistance rating, providing maximum security and stability for everyone on board.

**Rest assured that our IMO-certified flooring solutions guarantee the utmost safety, comfort, and style for your cruise ship.**

We prioritize  
the safety,  
the well-being  
and satisfaction  
of both you and  
your passengers.

Effortless  
maintenance  
and installation  
made simple

# Streamline your experience

We take pride in offering a wide selection of décor options that cater to every taste, with the added benefits of Luxury Vinyl Tile: its exceptional durability and effortless maintenance.

These qualities make LVT an ideal choice for cruise ships, where longevity and ease of upkeep are of paramount importance.

## Durable. Reliable. Lasting.

- . 0.55 mm wear layer ensuring high-traffic resistance and timeless beauty for an extended life-span.
- . Proven anti-static and scratch-resistant properties.
- . 10-year commercial warranty

## Suitable for wetrooms

- . Waterproof collection, making it ideal for bathrooms in cabins and any wet areas.
- . Slip resistance R10

## Glue down

- . A unique and customized appearance through the combination of various side-by-side designs.
- . Enhanced stability: strong bond to subfloor, no shifting or movement over time.

## Hassle-free solution

- . PUR surface treatment guarantees an easy maintenance and provides excellent stain resistance
- . Simple cleaning with neutral detergent and warm water

## Design overview

### 16 great designs

6 designs available from stock and an additional 10 designs that can be made-to-order, ensuring that you have plenty of options to choose from. Natural and sleek matt finish

Carefully chosen to add style to your cruise and to match with Tarkett carpet and lino ensuring IMO certification.

# Installation

## IMPORTANT!

- Make sure all specifications and instructions are followed carefully.
- Contact your Tarkett representative if you are unsure about any part of the installation.
- This information is subject to change due to continuous improvement.
- Use the same shade number for each continuous surface.
- Store the boxes in small neat piles (max. 5 boxes high).
- Let the flooring acclimatise at least 24h before laying at room temperature (minimum 15°C).
- The subfloor must be flat, level, clean, without marks (no felt pen, marker, etc.), sound, dry, solid, hard, smooth and not exposed to moisture. Absorbency must be checked and adjusted to have moderately absorbent subfloor.
- Use only adhesives recommended by Tarkett and developed for LVT installation. Always follow the adhesive manufacturer's instructions and recommendations.
- For specific areas with sunlight exposure (winter garden...), select an adapted adhesive recommended by manufacturers.
- The work must be completed with an inspection: ensure that the newly laid floor is free from adhesive residues.

## A - PREPARATION AND IMPORTANT INFORMATION PRIOR TO INSTALLATION

### A1. Acclimatization

It is important to store the planks for at least 24 hours before installation at a minimum room temperature of 15°C /see each country regulations/. This temperature should be maintained throughout the installation.

### A2. Room temperature conditions

The minimum temperature of the subfloor should be 12°C and room temperature 15°C. The recommended relative humidity inside the room should be 35-65% (see each country regulations).

Planks should be stored flat in their packages, in small neat piles (max. 5 boxes high).

### A3. Subfloor condition

The subfloor must be level, flat, clean, free from marks (no felt pen, marker of any type, ballpoint pens, paint, etc., that could cause discoloration due to migration) sound, dry, solid, hard, smooth (the absorbency must be checked) and not exposed to moisture.

The preparation/dryness of the subfloor and installation procedures should all be in accordance with the current relevant Standard within the country of use. The dryness of a solid subfloor should be below the maximum moisture level permitted when tested in accordance with that Standard.

E.g. in the UK, the relative humidity of concrete surfaces must be below 75%, and less than 2% with the CCM method. In North America, ASTM F-170 recommends a water-to-cement ratio of 0.40 to 0.45.

Before selecting a smoothing compound, check what type of traffic the floorcovering will be subjected to once installed. Latex smoothing compounds are not suitable for areas that will receive heavy traffic, especially heavy, narrow wheeled traffic (see EN 12529, Castors and wheels). Check levelling compound compatibility and follow the instructions of the levelling compound manufacturer.

**Note:** exclusion of liability (adhesives, levelling compounds, etc.) Although Tarkett may list a selection of adhesive, levelling compound and surface damp-proof membrane manufacturers and types, we do not guarantee the products listed. The list of products and manufacturers is not guaranteed complete or current. Tarkett will accept no liability for any of these products failing to perform in conjunction with any of its products. It is the responsibility of the adhesive, levelling compound and surface damp-proof membrane manufacturer and flooring contractor to ensure the products being used are appropriate for use and applied in accordance with the manufacturers' recommendations.

### A.4 Underfloor heating

It is imperative that underfloor heating systems have been previously commissioned and found to be functioning correctly before installation of the floorcovering. Ensure that the underfloor heating system is switched off 48 hours before installation of the floorcovering commences and remains off for at least 48 hours after installation is completed. While the underfloor heating system is off, an Alternative heating source should be provided, if required, to ensure that the installation area is kept at a constant temperature of 15-28°C. Gradually increase the temperature over a number of days by only a few degrees per day until the desired room temperature is reached.

The temperature should never exceed the floorcovering industry's agreed maximum of 27°C on the underside of the floorcovering (the adhesive line).

## B – INSTALLATION

### B1. Laying direction

Before starting to install tiles/planks, determine the type of laying taking into account the shape of the room and the design to be laid.

Important! Before laying the first rows of tiles, check that:

- the cut tiles closest to the walls are more than 10 cm wide;
- at doorways and corners, the cut tiles are not less than half a whole tile.

### Tiles

- Tiles are marked on the reverse with arrows. Tiles should be laid in a checkerboard pattern.
- Installation should start from the center of the room and finish on the sides (walls).

### Planks

Install planks in the same direction to avoid matte/shiny reflection of the surface.

- Stagger each row of planks to ensure that the end joints do not coincide with the previous row installed.
- For wooden pattern, avoid to install planks with the same design next to each other.

# Installation

## B.2 Gluing

- Glue with an acrylic adhesive emulsion recommended by Tarkett. Apply about 250 g/m<sup>2</sup> using the recommended trowel (A1 according TKB norm).
- Always follow the adhesive manufacturer's instructions and respect adhesive drying and working time.

For more details on gluing, please refer to the separate sheet: Adhesive recommendations [https://media.tarkett-image.com/docs/BR\\_INT\\_recommended\\_adhesives.pdf](https://media.tarkett-image.com/docs/BR_INT_recommended_adhesives.pdf)

- In case of particular conditions, ie. Significant temperature variation (veranda, winter garden...) or heavy traffic, bi-component adhesive could be required.
- Place the tiles or planks tight edge to edge.

- After selected area installation, press manually the tiles or planks using a piece of board with a rounded edge.

- After manual pressing, use a heavy roller in both directions to ensure final bonding.

- We recommend to use adhesive dedicated to IMO usage.

## C – AFTER INSTALLATION

**IMPORTANT! Wait 48 to 72 hours before allowing any foot traffic or moving in furniture.**

### C 1. Protection of installation

- If building work is carried out after installation, the floor should always be protected by covering it with hardboard or plywood sheeting.
- Masking tape must not be stuck directly to the floor.
- Never subject a newly installed floorcovering to heavy wheeled traffic at an early stage, as this will force adhesive from beneath the floorcovering.

### C.2 Initial site clean

- An initial site clean is always recommended before the new floorcovering is commissioned.
- Residual adhesive should be removed with methylated spirits and a clean cloth.
- Lightly soiled floors: vacuum, sweep or damp mop the area to remove loose dirt and building dust. A combined machine is very effective for large areas (combined scrubber/dryer with cylindrical brushes for safety flooring).

Note: Although Tarkett may list a selection of adhesive, levelling compound and surface damp-proof membrane manufacturers and types, we do not guarantee the products listed. The list of products and manufacturers is not guaranteed complete or current. Tarkett will accept no liability for any of these products failing to perform in conjunction with any of its products. It is the responsibility of the adhesive, levelling compound and surface damp-proof membrane manufacturer and flooring contractor to ensure the products being used are appropriate for use and applied in accordance with the manufacturers' recommendations. If any doubts or clarifications should be needed, please contact your local Tarkett representative for further information.

# Maintenance

## GENERAL ADVICE

- Clean the floorcovering regularly as this is more cost effective and hygienic than occasional heavy duty cleaning.
- Always follow dosage instructions carefully.
- Wipe up any grease and spilt oil immediately, as it may damage the surface.
- Resilient floors are damaged by solvents.
- Black rubber wheels and rubber feet can discolour the floorcovering. All chair and table legs should have good quality feet. Felt feet are not recommended in commercial interiors. Hard plastic is preferred.
- Remember that light colours need more frequent cleaning.

## PREVENTIVE CARE

### Entrance matting

About 80% of surface soiling that has to be cleaned off is brought from outside. And 90% of that soiling can be avoided by an effective and correctly dimensioned entrance mat. The less dirt that comes in through the entrance, the lower the maintenance requirements.

## DAILY AND REGULAR CLEANING

### Dry mopping

Remove dust and dirt with dry mop.

OR

### Vacuum cleaning

To remove dust and loose dirt. Recommended for large areas and initial site cleaning.

### Damp mopping

Use a mop dampened with water or detergent solution. It is essential that water does not stay on the floor or leave a film. The floor should be virtually dry after 15-20 seconds.

OR

### Combined machine with brush

Industrial machine-cleaning (large areas). Use diluted neutral detergent. Adjustable speed 300-500rpm. Use nylon brush not white/beige pad !

### Manual brush

Brush (with medium brushes).

OR

### Rotowash with brushes

Spray diluted detergent and clean with water or water+detergent.

### Spot and stain removal

Treat stains immediately. Hand spot using a white/red nylon pad with neutral detergent (solvents should not be used). Work from the outside of the mark towards its centre. Rinse and wipe afterwards with clean water.

## PERIODICAL CLEANING

### Light soiling: Spray Cleaning

Mix water and neutral detergent in the container tank. Suitable speed 300-500rpm. Red pad is recommended.

### Heavy soiling: Rotowash

Clean with the cylindrical scrubbing machine (spray detergent diluted with water through the machine).

## If needed:

### Dry buffing

When necessary, dry buff to recover gloss. White-beige pad. Suitable speed is 500-1000rpm.

If any doubts or clarifications should be needed, please contact your local Tarkett representative for further information.
