

Tarkett DESSO Carpet Tiles MSDS & COSHH

To Whom It May Concern,

Material Safety Data Sheet (MSDS)

Carpet Tiles do not come into the category requiring ECHA verification. MSDS are only necessary for materials containing chemical components & hazardous materials, not for compositions like carpet tiles.

The following link can provide further information:

COSHH Regulations

Tarkett DESSO branded carpets and carpet tiles are produced from manufactured materials. These include fibres such as Nylon and Polypropylene, which form the user surface, and Polyester, which forms part of the intermediate layer and the final backing.

Tile backing materials include bitumen or polyolefin, synthetic latex and virgin or recycled limestone filler.

None of these products show any response to changes in climatic conditions and there are no substances present that are hazardous to health. Each product has been tested at source.
